

DEFLASHING MACHINE : HIWA 60

The HIWA 60 Deflashing machine is used for deburring of parts like rubber washers , O-rings, and so on . Workpieces are placed inside the machine tumbling tank . After closing the machine door , liquified nitrogen are injected into the machine tank . As the temperature falls down , with the contribution of steel balls movement as a result of tank rotation , burres are separated from workpieces . Turning speed and temperature is controlled accurately and system is equipped with inching control system for ease of material discharging .

Specification :

Capacity :	60 lit.
Power Supply :	220 VAC / 50 Hz
Rated Power :	1.1 Kw
Insulation of tank :	P.U.
Insulation of cover :	foam
Length :	1100 mm
width :	1000 mm
height :	1200 mm
Weight :	200 Kg

Note : The above specifications were developed in accordance with Hiwa's standard procedures and are subject to change without notice .
